

EMH Direkt

Concentrate

Liquid concentrate

The natural environment of the intestinal flora can be considerably disturbed or changed due to stress and other physical burdens, such as illnesses. Bacteria, which produce fermenting and acidic substances, find ideal living conditions here. Their degradation products can have a considerable negative influence on the entire metabolism. By regularly feeding EMH Direkt, an improved bioavailability of nutrients and active ingredients in the feed can be achieved. Metabolic processes are naturally supported and brought into balance. Consumed with the hard feed, EMH Direkt also ensures a stable intestinal flora and a strengthened immune system.

Recommended feeding:

Feeding recommendation:

ponies & small horses: 15 ml per day
large horses: 30 ml per day

Is fed with the crib feed.

Also ideal after worming, inoculations or illnesses, as well as times of intensive training.

Composition: 100 % Fermented plant extract (EMH)

Analytical constituents and levels: 0,1 % Crude protein, 0,1 % Crude ash
