volaris Forage shell-less with insects

Wild Bird Feed

Our Eggersmann volaris TERRACEgrain Mix with insects is a shell-less protein-rich mixture made from selected ingredients tailored to the needs of wild birds. It is particularly suitable for year-round feeding on balconies or patios, as it does not contain any shells that remain lying around! With the important fat, protein and energy-rich ingredients and the unique mixture such as crunchy cereal flakes, shelled sunflower seeds, peanuts and mealworms, you offer domestic birds an optimal natural recipe that makes their hearts beat faster and ensures a very special treat for their beaks.

The natural habitats and the associated food supply for our wild birds are constantly changing and becoming increasingly scarce. Help to preserve our diverse birdlife by feeding them all year round. The natural cycle of the seasons demands a lot of energy from the birds. If you feed them, the wild birds will be grateful for your support and will delight you with their cheerful chirping.

The benefits at a glance:

- with dried mealworms
- rich in fat and protein
- suitable for all free-living bird species
- ideal for feeding all year round
- shell-free - ideal for balcony & terrace

Recommended feeding:

Our Eggersmann volaris TERRACEgrain Mix with insects is suitable for year-round feeding! If you offer the feed in bird houses or feeders, clean them regularly with hot water. In this way you minimize the transmission and spread of pathogens. Make sure that the feed cannot get soaked even in strong winds, snow and rain, otherwise it will spoil or freeze and the birds will no longer eat it.

Did you know that robins, yellowhammers, dunnocks and blackbirds are so-called ground feeders? They don't like to go to the feeder, but like to pick up the seeds from the ground. If you have space in your garden, provide a ground feeder. Simply fill a wooden or plastic bowl with feed and place it on the ground.

If you offer feed, please also provide drinking water for the birds. Especially in winter, when natural water sources such as puddles or water in gutters are frozen, birds also need an extra bowl of water. However, there is no need for an expensive bird bath at the bird feeder; a flower pot saucer or an old soup plate are perfect as a watering place. The water should be changed regularly.

Composition: Sunflower seed, dehulled, Haferflocken, Peanuts, Wheat (flaked), Mealworms dried, Raisins, Rapeseed oil
